

Crystal Ray Pendant Tutorial

Skill Level: Intermediate

I'm happy to share what I created with you but there are a few things to make clear first. The unloved disclaimer....

Please do not share, resell, claim ownership, or redistribute the content of this tutorial in any way, shape or form. This includes but not limited to any and all electronic devices, fax, printed, rewritten, or likewise. The content of this tutorial including photos, video if any, instructions are property of Arlene Schiffer.

You may resell your work but can not claim the technique to be your own. It actually belongs to everyone. Your purchase is a lesson on how to make the item featured by using these techniques

Wrapping Technique is public domain; this tutorial, design and idea are the property of Arlene Schiffer October, 2021

As with all artists sharing their skills and designs with you, if you learned something from this tutorial, a simple thank you or letting people know where you learned it is a great ego booster and good karma.

A few items you will need in order to complete this project

TOOLS

- Wire cutters
- Round, needle nose pliers
- Flat nose pliers, nylon are fine
- Bail Maker (*optional You use needle nose*)
- Rind mandrel (*optional, used to help shape*)
- A double point stone 30mm in length

MATERIAL

- 2 pieces of 20 gauge (.80mm) dead soft copper wire. Cut 1 at 10 inches (*approx 25cm*) and cut another at 18 inches (*approx 50cm*) (*can be any wire you choose, this tutorial I am using copper*)
- Cut one piece of 26 gauge, (.40mm) 3 feet, 90cm in length.

Quick Technique Guide

This tutorial, I'm using a wrap technique we usually call the 2/2 weave. It's a simple, yet very neat looking weave that's commonly used in most wire wrap designs.

The steps are easy and repetitive.

To start a 2/2 weave, place your wrapping wire over the top of the frame wire so the longer end is towards the top. Leave about 3 inches of a tail to hold onto

Frame wire is also base wire. It's the larger wire as your wrapping wire is a smaller gauge

Taking the long end of the weaving wire, wrap 2 times around the frame wire

I recommend to squeeze the wire a little so it will have a better form around the frame.

Take a second frame wire and place it on top of the bottom frame wire, Wrap 2 times around both pieces of frame wire

You can spread the frames wires a little then wrap 2 times around the first (bottom) frame wire, like you did in the first step

In a nut shell, that's a 2/2 weave. Featured tutorial is next

Take the longest frame wire and locate the center. Using your flat nose pliers, fold the wire over the tip as shown in the picture.

Then measure 1 inch down the fold and mark it with a marker.

Using needle nose pliers, hold the frame at the inch mark. Make sure the wire is placed at the bottom of the pliers as seen. Then bend the wire around the pliers so they are straight with the folded part, as seen
